until 11 1972 dinkhorst inserted 170 iridocapsular lenses in 158 patients the first operation took place on 16 9 1965 initially indication for the fitting
of an iridocapsular lens was congenital or traumatic cataract in children since the extracapsular cataract extraction necessary at that age facilitated
and the desire to reduce dislocations and the development of ecd to a minimum induced dinkhorst to perform primary iridocapsular lens implant
operations in cases with senile cataract as weh this explains the decrease in the fitting or iris clip lens implants in favor of iridocapsular lens
implants see fig 39 the distribution of the patients ages in these 170 cases is therefore quite different from that of the 677 iris clip lens implant
operations see fig 40 the technique of the iridocapsular lens implantation is described on page 59 numerical data are shown in fig 41 noteworthy in
this table are the following points 1 the average age at operation of 30 82 years which is very low compared with the 65 80 years for the iris clip
lens series may be explained by the relatively large number of children in this series see fig 40
