The unofficial guide to prescribing lays out the practical steps of how to assess, investigate, and manage a patient, with a focus on what to prescribe and how to prescribe it. Its aim is to empower newly graduated junior doctors to excel at dealing with emergencies and handling complex prescribing scenarios. Prescribing errors cost healthcare systems millions annually, so early training in prescribing has become an urgent priority of medical education and now forms an essential part of teaching and assessment. The unofficial guide to prescribing is the same as the unofficial guide to passing OSCEs, designed to address this requirement. It is written by junior doctors still close to the transition from theory to practice, overseen by a review panel of senior clinicians to ensure accuracy and designed to help medical students practice and learn as much as possible about prescribing in actual clinical scenarios before they have to do it for real. Each scenario is presented as you would see it in the hospital setting and covers initial step-by-step assessment of the patient, how to assess, assessment findings, and immediate management. Initial investigations, initial management, reassessment, treatment, handing over the patient, prescribe alerts throughout, written-up drug charts, blank drug charts for copying and practice. Combination products are therapeutic and diagnostic products that combine drugs, devices, and/or biological products according to the US Food and Drug Administration (FDA). A combination product is composed of any combination of a drug and a device, a biological product and a device, a drug and a biological product, or a drug device and a biological product. Examples include prefilled syringes, pen injectors, autoinjectors, inhalers, transdermal delivery systems, drug eluting stents, and kits containing drug administration devices packaged with drugs and/or biological products. This handbook provides the most up-to-date information on the development of combination products from the technology involved to successful delivery to market.
