enable a new generation of modeling simulation applications to emerge. Develop and interoperate x3d is the next generation open standard for 3d on the web. It is the result of several years of development by the 3d consortium's x3d task group instead of a large monolithic specification like vrml, which requires full adoption for compliance. X3d is a component-based architecture that can support applications ranging from a simple non-interactive animation to the latest streaming or rendering applications. X3d replaces vrml but also provides compatibility with existing vrml content and browsers. Don Brutzman organized the first symposium on vrml and is playing a similar role with x3d. He is a founding member of the consortium. Len Daly is a professional member of the consortium and both Len and Don have been involved with the development of the standard from the start. The first book on the new way to present interactive 3d content over the written by two of the designers of the standard, plentiful illustrations and screen shots in the full color text companion website with extensive content including the x3d specification, sample code, and applications content creation tools, and demos of compatible browsers.

**Professional Genealogy 2001** The essential reference for human development theory. Updated and reconceptualized the handbook of child psychology and developmental science. A four volume reference is the field defining work to which all others are compared. First published in 1946 and now in its seventh edition, the handbook has long been considered the definitive guide to the field of developmental science. Volume 1 Theory and Method presents a rich mix of classic and contemporary theoretical perspectives, but the dominant views throughout are marked by an emphasis on the dynamic interplay of all facets of the developmental system across the life span. Incorporating the range of biological, cognitive, emotional, social, cultural, and ecological levels of analysis, examples of the theoretical approaches discussed in the volume include those pertinent to human evolution, self-regulation, the development of dynamic skills, and positive youth development. The research methodological and applied implications of the theoretical models discussed in the volume are presented. Understand the contributions of biology, person, and context to development within the embodied ecological system. Discover the relations among individual, the social world, culture, and history that constitute human development. Examine the methods of dynamic developmental research. Learn person-oriented methodological approaches to assessing developmental change. The scholarship within this volume and as well across the four volumes of this edition illustrate that developmental science is in the midst of a very exciting period there is a paradigm shift that involves increasingly greater understanding of how to describe, explain, and optimize the course of human life for diverse individuals living within diverse contexts.

A newly energised youth culture went hand in hand with new technologies expanding educational opportunities, new social attitudes, and profound political differences between the generations. This volume explores the ways in which these apparently seismic changes were reflected in British fiction of the decade. Chapters cover first-wave feminist writing that fused the personal and the political, gay, lesbian, and immigrant voices, and the work of visionary experimental and science fiction writers. A major critical reevaluation of the decade this volume covers such writers as J.G. Ballard, Anthony Burgess, A.S.
