Theory and Credibility 2021-07-20 ashworth et al address this key challenge in the field with a new vision of how to connect empirical and theoretical work one rooted in the idea of all else equal theory the authors argue implicitly rests of the idea of all else equal and it s precisely this question that empirical work attempts to confirm thus theory and empirics have an intrinsic connection and in recognizing this scholars can bridge the gap between the two the first part of the book examine the all else equal connection and goes on to show how how theoretical models yield empirical implications and how substantive identification is the lynch pin of a credible research design the second part then follows the progressive back and forth between theory and empirics in existing scholarship breaking these interactions into five types reinterpreting elaboration distinguishing disentangling and modeling the research design

Integrating Knowledge Through Interdisciplinary Research 2013-08-22 in this important new text holland seeks to explain by means of social scientific and philosophical inquiry the difficulties that researchers often experience when attempting to integrate knowledge from different academic disciplines either
individually or as part of a team of subject specialists it is argued that the difficulty of integrating knowledge from different academic disciplines is the result of firstly an inadequate justification of the nature of scientific integration and differentiation and secondly the dominance of disciplinary specialization in scientific inquiry by focusing on both the theoretical justification for and the practical feasibility of integrating knowledge through interdisciplinary research this book asks what properties of reality make the integration of knowledge from different academic disciplines possible and to what extent it is feasible to integrate knowledge through interdisciplinary research within a traditional disciplinary context accordingly the text is both philosophical and social scientific in content philosophical in the sense that it presents a theory of causal determination which will help researchers to understand how reality is both differentiated and interconnected social scientific in the sense that it presents the results of three case studies of collaborative interdisciplinary research projects the book is heavily informed by the philosophy of critical realism the philosophical argument about the possibility of integration and specialization in science draws explicitly on some of the key concepts of critical realism particularly those comprising the theory of integrative pluralism while critical realist assumptions underpin the social scientific argument about the causal influence of the social system of knowledge production by exploring researchers conceptions of knowledge and of reality on the one hand and their decisions about what sort of knowledge to produce on the other holland shows how the difficulty of scientific integration is both a problem of knowledge and a problem of knowledge production this book is essential reading for students and academics interested in the emerging topic of knowledge integration and interdisciplinarity

Advances in Facet Theory Research: Developments in Theory, Application and Related Approaches 2019-11-01 in this research topic the two editors bring together a series of articles that use facet theory and allied approaches to research since its inception in the work of louis guttmann in the mid twentieth century facet theory has become an established approach within social science research in addition over the past 70 years a wide range of research publications have appeared operating within the theoretical and analytic rubric of facet theory and for the last two decades a biennial international conference has been held
devoted to facet theory research when using a facet theory approach an implicit aim of the research within this framework is to bring together in an explicit manner a clear definition of the content area that is being investigated along with data analysis procedures integrating the explicit design of research content for example attitudes values etc and its subsequent analysis for example to identify the variables that are influential to respondents in relation to the specific area under investigation allows for the construction of theory relating to the content area and for the meaningful measurement of complex research areas the clear explication of an area of research content is achieved through the use of a mapping sentence ms in a ms all of the pertinent variables called facets associated with the specific subject matter of the research study are specified in the form of a natural language sentence where facets variables are arrange to demonstrate how these theoretically relate to each other sub levels of facets are defined in such a way as to capture the relationships of research variables facets to each other and the overall research domain background variables are also stated in the ms along with a specified range over which observations will be made to test the veracity of the structural hypotheses statements regarding the proposed manner in which variables are related to the study s content implicit in the ms furthermore by using a ms the researcher is able to select variables that appropriately address the area of content traditionally facet theory has been used in quantitative research but has recently been applied to the analysis of qualitative and philosophical research which incorporates a declarative mapping sentence in such research and which is included in this research topic in order to interrogate these structural hypotheses quantitative data analysis procedures are employed such as smallest space analysis ssa and partial order scalogram analysis by base coordinates posac in ssa the structure of the content area of interest the variables that have been included in the ms can be interrogated as observations that have been made along the specified outcome range are represented geometrically as partitioned regions in a concept space related to the specific research domain individual respondents may also be investigated in terms of their profile of facet related scores using posac a similar approach is employed when analysing information from qualitative facet theory research which interrogates the structural hypotheses present in the declarative mapping sentence through approaches such as content and narrative analyses this research topic presents work from scholars with particular emphasis upon how the approach has developed both theoretically and in terms of its application new areas of application and advances in theory development

Theories of Learning and Studies of Instructional Practice 2011-04-19 this is a book about an attempt to change the way math was taught in a particular classroom its title plays on our everyday usage of the terms theory and practice in education these terms are conventionally treated oppositionally we have theories about what we should do and we have what teachers actually do do in this way theory stands prior logically and chronologically to practice practice inevitably becoming theory s imperfect realization we seek in this volume however to develop a different stance with regard to the relationship between the two taking the details of instructional practice as our principle object of study we explore what role theories of learning might play in illuminating such practices the book is about actual practices by which teaching is done and how contemporary theories of learning might help us understand those practices it seeks to provide a foundation for future practice based inquiry in education by addressing the methodological question how do we go about studying instructional practice in a principled way
