Joe Engelberger, the pioneer of robotics industry, wrote in his 1989 book "Robotics in Service" that the inspiration to write his book came as a reaction to an industry-sponsored forecast study of robot applications which predicted that in 1995, applications of robotics outside factories, the traditional domain of industrial robots, would amount to less than 1% of total sales. Engelberger believed that this forecast was very wrong and instead predicted that the non-industrial class of robot applications would become the largest class. Engelberger's prediction has yet to come to pass, however he did correctly foresee the growth in non-traditional applications of robots. Robots are now beginning to march from the factories and into field and service applications. This book presents a selection of papers from the first major international conference dedicated to field and service applications of robotics. This selection includes papers from the leading research laboratories in the world together with papers from companies that are building and selling new and innovative robotic technology. It describes interesting aspects of robots in the field ranging from mining, agriculture, construction, cargo handling, subsea operations, removal of landmines to terrestrial exploration. It also covers a diverse range of service applications such as cleaning, propagating plants, and aiding the elderly and handicapped. It gives considerable attention to the technology required to realise robust, reliable and safe robots.

Housesteads is one of the most important forts on Hadrian's Wall. Extensive excavations were carried out between 1874 and 1981 by Newcastle University, combining the results with those of excavations.
done between 1959 and 1961 by Durham University we now have a complete plan of the north east part of the fort. These excavations uncovered principally buildings XIII, XIV, and XV plus stretches of rampart between the north and east gates along with a multitude of features and stratigraphic evidence revealing not only the sequences but also large finds assemblages in addition to shedding much light on the material culture of the fort's occupants and the structural and chronological relationships between various parts of the fort. Limited reinvestigation of building XIV and excavation of the east end of building XV enabled significant reinterpretation of the original conclusions reached by the Durham investigators including some redating of structures. These excavations uncover the full 300-year period during which the fort formed an integral part of the Roman military frontier for much if not all of that time. The base of the Cohors I Tungrorum Milliaria Peditat. This report documents the excavations and gives full finds reports and the analysis of the evidence has enabled the authors to provide a full history of this part of the fort.
