various scholars explore the material in science and science education and its role in scientific practice such as 
those practices that are key to the curriculum focuses of science education programs in a number of countries as 
a construct culture can be understood as material and social practice this definition is useful for informing 
researchers nuanced explorations of the nature of science and inclusive decisions about the practice of science 
education sewell 1999 as fields of material social practice and worlds of meaning cultures are contradictory 
contested and weakly bounded the notion of culture as material social practices leads researchers to accept that 
material practice is as important as conceptual development social practice however in education and science 
education there is a tendency to ignore material practice and to focus on social practice with language as the 
arbiter of such social practice often material practice such as those associated with scientific instruments and 
other apparatus is ignored with instruments understood as inscription devices conduits for language rather than 
Sources of material culture in which scientists share material other than words haidr 2004 p 7 when they 
communicate new knowledge and realities while we do not ignore the role of language in science we agree with
